

ITAR/EAR Compliance Program

An **ITAR/EAR Compliance Program** helps organizations understand, implement, and maintain the controls required to comply with the **International Traffic in Arms Regulations (ITAR)** and the **Export Administration Regulations (EAR)**. A well-developed compliance program protects controlled technical data, products, and technologies while reducing regulatory risk and supporting eligibility to serve aerospace, defense, and other export-controlled industries.

Our **ITAR/EAR Compliance** service begins with a comprehensive assessment of your organization's products, processes, data handling practices, and export control obligations. We work closely with your team to identify compliance gaps, develop required policies and procedures, establish access controls, train employees, and implement practical safeguards that align with regulatory requirements. Through implementation support, internal assessments, and ongoing guidance, we help your organization strengthen export compliance, reduce business risk, and build a sustainable compliance program that supports customer confidence and long-term growth.
