

AS9102 First Article Inspection (FAI)

An **AS9102 First Article Inspection (FAI)** course provides the knowledge and practical skills needed to successfully plan, perform, and document First Article Inspections in accordance with the **SAE AS9102** standard. Properly executed FAIs verify that manufacturing processes are capable of consistently producing products that meet engineering, customer, and regulatory requirements while reducing production risk and improving customer confidence.

Participants learn the complete First Article Inspection process, including drawing review and ballooning, characteristic accountability, material and special process verification, inspection planning, measurement requirements, and completion of **AS9102 Forms 1, 2, and 3**. Through real-world aerospace examples and hands-on exercises, attendees gain the confidence to prepare accurate FAI packages, avoid common compliance issues, resolve customer findings, and ensure products meet AS9100 and customer-specific First Article Inspection requirements.
